BETA+ perfect helmet protection over your headset. Just slip it over when you need to....

OPTIONAL ultra-safe visor lifts up out of the way and out of sight and has adjustable friction

- EN966 ultra-high protection level (DOUBLE even the USAF fast jet helmets!)

- perfect upward vision and the visor reaches to below the chin for quiet warmth

- wonderfully light, compact and comfortable...

BETA-FLIP+ perfect head protection all-in one with your headset. Ideal if you need to listen or talk to others around you...

just flip the earcups out to chat, or even furl them back....

overleaf you'll find more details.....

BETA+: Comunica's tough EN966 CE safety helmet to wear with ear defenders or comms headsets.

- Comunica has developed the **BETA+** from their classic **BETA**, without losing **BETA's** wonderful lightness, comfort and neat small size.
 - **BETA+** provides much higher head protection than EN397 Industrial Safety Helmets. It protects against all-round impacts (at DOUBLE the level of the USAF fast jet helmets!), so is ideal for work in moving vehicles, boats etc and where wearers may fall or be struck by moving objects.
 - **BETA+** (and its **BETA-FLIP+** version with earcups attached to the standard mountings), can be worn with any of our comms headsets or just ear defenders.
 - The tough OPTIONAL **VIS+** visor provides eye and face protection and microphone quiet.
- In summary, **BETA+** gives you:

BPGENA E&OE 16/02/02

- LIGHTNESS:

No more tired, sore necks, as, with our hi-tech composite manufacture:

- **BETA+** weighs a featherlight 550gms!
- COMPLETE WITH VISOR, **BETA+** STILL WEIGHS ONLY 750gms...
- OTHER EN966 HELMETS WEIGH A HEAVY 1050gms, 50% more...

- OUTLINE SIZE:

You get the easiest possible access to structure around you because **BETA+** is much neater and is smaller overall than other EN966 helmets.

- VISORS:

We make these ourselves now, so they can now be IDEAL for flying:

- They give PERFECT UPWARD VIEW, having no "peak" in the way.
- Their wide double curvature gives superb wrinkle-free view ALL ROUND.
- They reach really low down on the chin for quiet and warmth.
- They lift up high, completely out of landing view.
- Their holding friction is easily adjusted and they do not "snap up" in wind.
- They stay put safely, UP or DOWN, at all speeds, in all flight.
- In accidents though, they "break-away" safely if caught on moving objects, AS REQUIRED BY THE EUROPEAN PPE SAFETY DIRECTIVE
- They are available CLEAR, TINTED or TINTED+MIRROR colours.
- They are less expensive to replace....

- CHIN STRAP FASTENERS:

We have had specially convenient, safe, ones made:

- They are ALL METAL for durability and safety.
- They meet EN966 fully and are easily connected and disconnected.

- "FLIP-OUT" EARPHONE MOUNTINGS:

BETA+ has mounting points neatly moulded in ready for flip-out earphones.

The "**BETA-FLIP+**" version is ideal for wearers who need to talk or listen to others around them without comms.

- HEADSETS for BETA+:

These are usually any of Comunica's neat "fold-up" style or the attached "flip-out" kind, including models with Active Noise Reduction electronics and batteries in their headbands. We make headsets for ALL RADIOS and INTERCOM systems, to use in ALL ENVIRONMENTS.

- BETA+ COLOURS and BADGING:

The stock **BETA+s** are our almost luminous "LUCENT WHITE", RED and DARK BLUE Batches of helmets can be badged with your own logos and colour spec. economically...

BETA-FLIP+ and BETA+ helmets for on-body radios

Ultralight, (other UK EN966 helmets weigh 50% more...) and perfect comfort!

Perfect view straight up, (with or without visor, no peak in the way....)

Perfect head freedom, no neck pressure looking straight up.....

BETA-FLIP+ shown, but you may prefer to wear BETA+ over a separate headset...

LHS and RHS earphones can both have radio PTT buttons... (use whichever hand is free...) There's an optional belt/hand PTT too...

Comunica RADIO & I'COM headsets:
- have special noise reduction mics...
- cut out maximum ambient noise...
- connect perfectly to all radios...

BETA-FLIP+ earphones flip-out to chat between flights...
